

5. YZ frame - final check

Before we proceed further, let's make a final check. **IT IS VERY IMPORTANT** to have extrusions on the correct side of the frame.

Long extrusions - must be on the side of the frame **with the Prusa logo** and the **safety sticker**, also ensure longer extrusions are **closer together**.

Short extrusions - must be on the side of the frame **with the hexagonal recesses**, also ensure shorter extrusions are **further away from each other**.
