65. Mounting the X-carriage-back   ⌄

🟢 Push the cables from the Extruder **THROUGH** the X-carriage-back. Start with IR-sensor cable, then the extruder motor and hotend fan.

ⓘ **There are two variants of the hotend fan cable**, see the detail. The connectors are the same.

🟣 Next, add the print fan and SuperPINDA sensor cables.

⚠️ Cables from hotend are **NOT GOING** through the X-carriage-back!

🟠 Carefully insert the nylon filament and then slide the X-carriage-back towards the X-axis.
